HAZOP Guide Words

Deviations	Guide Word	Process Deviation (Examples of Cause)	Area of Application
Flow			
Less of	Less/Low Flow	Line blockage– filter blockage – fouling in vessels – defective pumps – restrictor or orifice plates –etc.	System
Misdirected	MisdirectedFlow	Flow directed to stream other than intended due to misalignment of valves –etc.	System
More of	More/HighFlow	Increased pumping capacity – reduced delivery head increased suction pressure – static generation under high velocity – pump gland leaks –etc.	System
None	No Flow	Incorrect routing – blockage – burst pipe – large leak – equipment failure (C.V., isolation valve, pump, vessel, etc.) – incorrect pressure differentia	System
Reverse	Reverse Flow	Incorrect pressure differential – two-way flow – emergency venting – incorrect operation – in-line spare equipment –etc.	System
Temperature			
Less of	Less/Low Temperatu	Ambient conditions – reducing pressure – loss of heating – depressurisation of liquefied gas – Joule Thompsoneffect – line freezing –etc.	System
Less of	MLess/Low Pressure	Generation of vacuum condition – restricted pump/ compressor suction line – vessel drainage –etc.	System
More of	More/High Pressure	Surge problems (line and flange sizes) – relief philosophy (process / fire etc.) – connection to high pressure system – gas breakthrough (inadequa	System
More of	More/High Temperat	Ambient conditions – fire situation – high than normal temperature – fouled cooler tubes – cooling water temperature wrong –cooling water failure	System
